`out`

Throws

Nothing.

Note

The format of the string representation isn't specified. Instances of `std::thread::id` that compare equal have the same representation, and instances that aren't equal have distinct representations.

Std::Thread::Native_Handle_Type Typedef

`native_handle_type` is a typedef to a type that can be used with platform-specific APIs.

Declaration

`typedef` *implementation-defined* `native_handle_type;`

Note

This typedef is *optional*. If present, the implementation should provide a type that's suitable for use with native platform-specific APIs.

Std::Thread::Native_Handle Member Function

Returns a value of type `native_handle_type` that represents the thread of execution associated with `*this`.

Declaration
