Effects

Destroys `*this`. If `*this` has an associated thread of execution (`this->joinable()` would return `true`), calls `std::terminate()` to abort the program.

Throws

Nothing.

Std::Thread Move-Assignment Operator

Transfers ownership of a thread of execution from one `std::thread` object to another `std::thread` object.

Declaration

```
thread& operator=(thread&& other) noexcept;
```

Effects

If `this->joinable()` returns `true` prior to the call, calls `std::terminate()` to abort the program. If `other` has an associated thread of execution prior to the assignment, that thread of execution is now associated with `*this`. Otherwise `*this` has no associated thread of execution.

Postconditions

`this->get_id()` is equal to the value of `other.get_id()` prior to the call. `other.get_id()==id()`.

Throws

Nothing.
