Note

`std::thread` objects are *not* `CopyAssignable`, so there's no copy-assignment operator, only this move-assignment operator.

Std::Thread::Swap Member Function

Exchanges ownership of their associated threads of execution between two `std::thread` objects.

Declaration

```
void swap(thread& other) noexcept;
```

Effects

If `other` has an associated thread of execution prior to the call, that thread of execution is now associated with `*this`. Otherwise `*this` has no associated thread of execution. If `*this` has an associated thread of execution prior to the call, that thread of execution is now associated with `other`. Otherwise `other` has no associated thread of execution.

Postconditions

`this->get_id()` is equal to the value of `other.get_id()` prior to the call. `other.get_id()` is equal to the value of `this->get_id()` prior to the call.

Throws

Nothing.

Swap Nonmember Function For Std::Threads

Exchanges ownership of their associated threads of execution between two `std::thread` objects.
