impure functions, defined
initial function
interrupting threads
  and exception safety
  background threads
  basic interface
  basic interruptible_thread implementation
  catching interruptions
  detecting interruption
  example implementation
  handling interruptions
  interrupt function
  interruptible_wait on a
    condition_variable_any
  interrupting future waits
  interrupting waiting on a
    condition_variable
  interruption point
  interruption_point function
  per-thread data structure
  race condition in naïve implementation
  sample implementation
  using a timeout
iterators, and concurrency

J

join_threads class, use with thread pool
join, std::threads, example of
joining threads, when exceptions thrown

L

lazy initialization
