and object
and race conditions
defined
example struct
memory model
acquire-release ordering
and happens-before
and inter-thread happens-before
and mutexes
and synchronizes-with
and synchronizing data between threads
carries-a-dependency-to relation defined
choice of semantics for read-modify-write operations
data dependency
dependency-ordered-before
and inter-thread-happens-before
compared to synchronizes-with
relation defined
example of data dependent ordering
example of transitive synchronization
example sequence
example with imposed ordering
example with no total order
lack of synchronization with relaxed operations
man in cubicle analogy
memory_order_acq_rel, 2nd
memory_order_acquire, 2nd, 3rd
memory_order_consume
memory_order_release, 2nd, 3rd
mixing with sequentially-consistent ordering
synchronization cost
synchronization using acquire and release pairings
transitive synchronization
across threads
using read-modify-write operations
applying to lock-free stack
