nonblocking operations, defined

O

oversubscription, avoiding

P

parallel_find, and out-of-order processing
performance
- Amdahl's law
- and cache line pressure
- and data structures
- and multiple processors
- and mutexes
- and reader-writer mutexes
- and task switching
- cache miss, 2nd
- cache ping-pong
- data contention
- data proximity
- false sharing
- hiding latency
- high contention
- I/O latency
- idle threads
- low contention
- massively parallel
- multiple applications
- number of processors
- oversubscription, 2nd
- reducing time taken vs. processing more data
- scalability
- scaling
