wait() member function, 2nd
and callable objects
and condition-checking functions
and functions
and spurious wakes
and std::notify_all_at_thread_exit
and std::unique_lock
choosing a predicate
relationship to notify_all
relationship to notify_one
use in a thread-safe queue
use with a concurrent queue
with a predicate
waiting with a timeout example
wait_for vs. wait_until
waking all waiting threads
waking one waiting thread
std::condition_variable_any
and timeouts when waiting
default constructor
destructor
notify_all() member function
notify_one() member function
try_lock_for() member function
wait_for() member function, 2nd
with a predicate
wait_until() member function, 2nd
with a predicate
wait() member function
with a predicate
