std::for_each, parallelizing
std::function, use with thread pool
std::future
  and
  and exception safety, 2nd
  and propagating exceptions
  and thread pool tasks
  and threads from std::async calls
  and timeouts when waiting
  and unique ownership
  conversion to std::shared_future
  example
  obtaining from std::packaged_task
  propagating exceptions
  propagating exceptions from get()
  share() member function
    and automatic deduction of variable type
  vs. std::shared_future
  wait_for() member function
  wait_until() member function
std::future_errc::broken_promise
std::future_error, introduction
std::future_status, 2nd
std::future<void>, as a done flag
std::launch::async, using to guarantee separate threads
std::lock
  and exceptions
  and std::unique_lock
  avoiding deadlock with
  example
std::lock function template, reference
std::lock_guard class template
  class definition
  destructor
  lock-adopting constructor
  locking constructor
