reference
std::make_shared, use for allocating a referencecounted object
std::memory_order enumeration
std::memory_order_acq_rel, reference
std::memory_order_acquire
reference
std::memory_order_consume, reference
std::memory_order_relaxed
reference
std::memory_order_release
reference
std::memory_order_seq_cst, reference
std::move
and std::thread
std::nested_exception, use for accumulating
multiple exceptions
std::notify_all_at_thread_exit, and
std::condition_variable::notify_all()
std::packaged_task
and exception safety
and std::future
as a callable object
comparison with std::async
compatible callable types
get_future() member function
introduction
obtaining a future
obtaining a std::future
passing tasks between threads
template parameter
wrapping tasks for a thread pool
std::partial_sum
alternative approaches
parallelizing
std::promise
and obtaining a result from multiple threads
