std::terminate
and std::thread destructor
std::this_thread::get_id
std::this_thread::get_id() nonmember function
and std::thread::id
std::this_thread::sleep_for
described
example
std::this_thread::sleep_for() nonmember function
and std::chrono, duration
std::this_thread::sleep_until
std::this_thread::sleep_until() nonmember function
and std::chrono::time_point
std::this_thread::yield() nonmember function
std::thread::id
comparison operators
specialization of std::hash
stream insertion operator
total order
std::try_lock() function template, reference
std::unique_lock class template
and std::condition_variable::wait
and std::condition_variable::wait() with a predicate
and std::notify_all_at_thread_exit()
bool conversion operator
class definition
default constructor
deferred-lock constructor
destructor
lock() member function
lock-adopting constructor
locking constructor
move constructor
move-assignment operator
mutex() member function
owns_lock() member function, 2nd
