and std::notify_all_at_thread_exit()
reference
release() member function
std::swap() nonmember function
swap() member function
try_lock_for() member function
and std::chrono::duration
try_lock_until() member function
and std::chrono::time_point
try_lock() member function
try-to-lock constructor
with a duration timeout
with a time_point timeout
unlock() member function
std::unique_ptr, as example of move semantics
std::vector, of std::thread
synchronization mechanisms, barrier

T

task parallelism
task switching
defined
example of
illusion of concurrency
templates, variadic
testing concurrent code
adjusting the thread count
architecture variations
avoid deadlock in test code
boilerplate test structure
brute force testing
combination simulation testing
controlling thread execution order
controlling thread scheduling
