defined
dynamic sizing
fixed size
potential for deadlock
queue contention
running tasks while waiting
scalability
simple example
stealing tasks from other worker threads
task size
tasks vs. threads
uneven work distribution
vs. std::async
waiting for tasks with std::future
work queue
work stealing
worker threads
wrapping tasks in std::packaged_task
thread_guard example
thread_local keyword
example
example usage
reference
use for interrupting threads
use for per-thread work queues
thread-safe stack, example
thread-safe, defined
time facilities
<chrono> header
clocks
adjustment during duration-based waits
is_steady member
now() member function
period member
shared epochs
std::chrono::high_resolution_clock
