Figure 5.7. The release sequence for the queue operations from listing 5.11

Chapter 6. Designing lock-based concurrent data structures

Figure 6.1. A queue represented using a single-linked list

Chapter 7. Designing lock-free concurrent data structures

Figure 7.1. Three threads call pop() concurrently, showing why you must check threads_in_pop after claiming the nodes to be deleted in try_reclaim().

Chapter 8. Designing concurrent code

Figure 8.1. Distributing consecutive chunks of data between threads

Figure 8.2. Recursively dividing data

Figure 8.3. Matrix multiplication
