1.5 Disadvantages and potential challenges of BDD 29

BDD requires high business engagement and collaboration 29 BDD works best in an Agile or iterative context 30 ▪ BDD doesn't work well in a silo 30 ▪ Poorly written tests can lead to higher test-maintenance costs 30

1.6 Summary 30

2 ***BDD—the whirlwind tour 32***

2.1 Introducing the train timetable application 33

2.2 Determining the value proposition of the application 35

2.3 Requirements analysis: discovering and understanding features 35

Describing features 35 ▪ Breaking features down into stories 37 Illustrating the stories with examples 38

2.4 Implementation: building and delivering features 38

Going from examples to acceptance criteria 39 ▪ Setting up Maven and Git 40 ▪ Executable specifications: automating the acceptance criteria 42 ▪ Automated tests: implementing the acceptance criteria 46 ▪ Tests as living documentation 55

2.5 Maintenance 56

2.6 Summary 58

PART 2 WHAT DO I WANT? DEFINING REQUIREMENTS USING BDD.....59

3 ***Understanding the business goals: Feature Injection and related techniques 61***

3.1 Introducing Flying High Airlines 63

3.2 Feature Injection 63

Hunt the value 64 ▪ Inject the features 65 Spot the examples 65 ▪ Putting it all together 66

3.3 What do you want to achieve? Start with a vision 67

The vision statement 68 ▪ Using vision statement templates 69

3.4 How will it benefit the business? Identify the business goals 70

Writing good business goals 71 ▪ Show me the money—business goals and revenue 72 ▪ Popping the "why stack": digging out the business goals 73 ▪ Impact Mapping: a visual approach 76
