6.8 Automating scenarios in JavaScript with Cucumber-JS 174

Setting up Cucumber-JS 175 ▪ Writing feature files in Cucumber-JS 175 ▪ Implementing the steps 176 Running the scenarios 177

6.9 Summary 178

PART 3 HOW DO I BUILD IT? CODING THE BDD WAY ...179

7 *From executable specifications to rock-solid automated acceptance tests 181*

7.1 Writing industrial-strength acceptance tests 183

7.2 Automating your test setup process 185

Initializing the database before each test 186 ▪ Initializing the database at the start of the test suite 186 ▪ Using initialization hooks 186 ▪ Setting up scenario-specific data 190 Using personas and known entities 192

7.3 Separating the what from the how 194

The Business Rules layer describes the expected outcomes 195 The Business Flow layer describes the user's journey 196 The Technical layer interacts with the system 198 How many layers? 199

7.4 Summary 200

8 *Automating acceptance criteria for the UI layer 201*

8.1 When and how should you test the UI? 203

The risks of too many web tests 203 ▪ Web testing with headless browsers 204 ▪ How much web testing do you really need? 205

8.2 Automating web-based acceptance criteria using Selenium WebDriver 206

Getting started with WebDriver in Java 207 ▪ Identifying web elements 210 ▪ Interacting with web elements 218 Working with asynchronous pages and testing AJAX applications 219 ▪ Writing test-friendly web applications 221

8.3 Using page objects to make your tests cleaner 222

Introducing the Page Objects pattern 223 ▪ Writing well-designed page objects 227 ▪ Using libraries that extend WebDriver 233

8.4 Summary 235
