brief contents

1 *Introduction to Bayesian optimization*

PART I: GAUSSIAN PROCESSES

2 *Gaussian processes as distributions over functions*

3 *Customizing a Gaussian process with the mean and covariance functions*

PART II: BAYESIAN OPTIMIZATION

4 *Refining the best result with improvement-based policies*

5 *Exploring the search space with bandit-style policies*

6 *Leveraging information theory with entropy-based policies*

PART III: SPECIALIZED OPTIMIZATION SETTINGS

7 *Maximizing throughput with batch and asynchronous optimization*

8 *Satisfying extra constraints with constrained optimization*

9 *Balancing utility and cost with cost-aware optimization*

10 *Learning from pairwise comparisons with preference optimization*

11 *Optimizing multiple objectives at the same time*

PART IV: SPECIAL GAUSSIAN PROCESS MODELS

12 *Scaling Gaussian processes to large data sets*

13 *Combining Gaussian processes and neural networks*

APPENDIX

Solutions to exercises
