Index

A

Advantages of Arduino, 2
Analog functions
  analogRead(), 85–86
  analogReference(), 87–88
  analogWrite(), 86–87
Analog In/Out, 79
  A/D converter, 80
  analog functions, 85–88
  analog reference types, 88
  analog serial monitor
    accessing serial monitor, 90–92
    analog input pin range, 88
    photocell schematic circuit, 89
    reading analog values, 90
    working with, 92
  digital *vs.*analog signals, 80
  duty cycle, 80
  mapping values
    constrain() function, 94
    map() function, 93
  pulse width modulation (PWM), 80
  Telematic Breath
    schematic circuit, 81–83
    source code summary, 84–85
    uploading source code, 83–84
AnalogRead() function, 85–86
AnalogReference() function, 87–88
AnalogWrite() function, 86–87, 206
Arduino board type selection, 15
Arduino bootloader, 4
Arduino C. *See* Sketching in code, structure of Arduino C
Arduino data types, 40
Arduino development environment, 4
Arduino ecosystem
  Arduinoland, 6–8
  community of makers, 5–6
  definition, 3
  open-source hardware, 5
  platform, 3–4
Arduino Ethernet Shield, 202
Arduino firmware. *See* Firmata
Arduino forum, 216
Arduino Haiku source code, 147
Arduino LiquidCrystal Character Creator, 153
Arduino Mega 2560, 210
Arduino Night, 5
Arduino sketches. *See* Firmata
Arduino Uno, 209
  general I/O pins, 80
  interface board, 62, 209
  predecessors, 138
Arithmetic operators, 42–43
Arrays, Arduino
  assigning array values, 134
  character arrays, 134–135
  declaring, 130–131
  multidimensional, 135–137
  using arrays of values, 132–133
  using limits and sizeof(), 133–134
ASCII character codes, 176–177
ASCII protocol, 176
Assignment operator, 42, 52
ATmega328, 137
Attach() function, 159
AttachInterrupt() function, 117–118
Available() function, 173, 181
AVR microcontroller, 4
