transistors
bipolar transistors, 227
MOSFETs, 229
NPN transistors, 228
PNP transistors, 228
EndTransmission() function, 199
Escape codes, 177

F

FILE_READ mode, 171
FILE_WRITE mode, 171
Firmata
host software, 212
opening, 211
test program, 211–212
Fish tank animation, 154–156
Flexible programmable hardware platform, 1
Flicker schematic circuit, 132
Flow control, 54
Flush() function, 189
For statement, 55–56
Freeduino Index, 240
Free open-source programming language, 212
FreeRAM() function, 138–139
Functions
Ambient Temps
schematic circuit, 103–105
source code summary, 106–109
uploading source code, 105–106
analog functions
analogRead(), 85–86
analogReference, 87–88
analogWrite(), 86–87
basic, 23–24
calling, 110
declaring, 109–110
hardware interrupts
attachInterrupt(), 117–118
detachInterrupt(), 118
HSB color mixer, 112
schematic circuit, 113–114
source code summary, 115–116
uploading source code, 114–115
interrupt service routine, 95
parameters, 111–112
random functions, 99
random(), 100–101
randomSeed(), 101–102
returns, 110–111
timing functions, 95
delay(), 96–97
delayMicroseconds(), 97
micros(), 99
millis(), 97–99

G

GetTag() function, 187
Global community. *See* Community of makers
Global variable, 41
Graphical programming environment, 214

H

Hardware errors, 30
Hardware interrupts, 117
attachInterrupt(), 117–118
detachInterrupt(), 118
Hardware libraries
creating instance, 144
Import Library, 144
#include pre-processor directive, 144
initializing, 145
LiquidCrystal library
Arduino Haiku source code, 147
begin() function, 148
clear() function, 149
createChar() function, 152
fish tank animation, 154–156
LCD schematic circuit, 145–146
LiquidCrystal() function, 148
print() function, 148–149
scrollDisplayLeft() function, 156
scrollDisplayRight() function, 156
setCursor() function, 149
Symbols and Characters(), 150–151
write() function, 151–152
secure digital (SD) library, 166
available() function, 173
