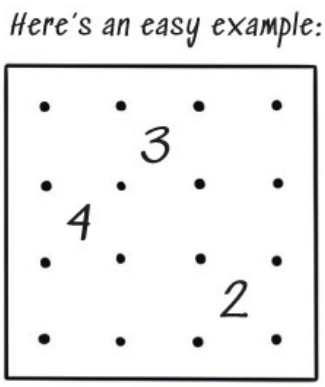
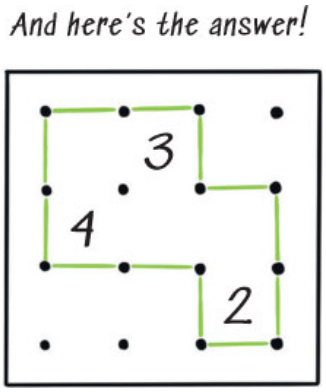
BAG

Is mathematics your bag? Like Loops, the game of Bag is played on a grid of any size.

1 This time, you draw your loop, or “bag,” around all the numbers. The numbers show how many squares each number must have around it, including the one it’s on and all the squares up, down, left, and right from it.





The 3 has three boxes: the one it’s on, one below it, and one to the left.
The 4 has the one it’s on, one above it, and two to the right.
The 2 has the one it’s on and the one above it.
Solved!

2 Here are some more to try …
