Game science

This is harder than it looks! Try not to give away triangles to your opponent by leaving two sides of a triangle for them to finish.

MAKE SQUARES

This game works the same way as the triangles game, but instead of making triangles, you try to make squares between the dots—or other four-sided shapes!

1 As in Make Triangles, draw lots of dots, then take turns joining the dots with straight lines. This time, make four-sided or square shapes instead of triangles. When you make one, fill it in using your pen.
