
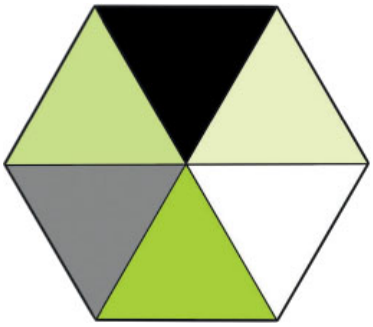
3 Now take your markers and use a different one to fill in each triangle.



4 Do this with all the hexagons. Each hexagon should have six different triangles—one of each shade—but it doesn’t matter what order they’re in. When you have 20 or more hexagons, you can start playing.

How to play

5 Divide the hexagons equally between the players.

6 Then take turns putting the tiles down on a flat surface.
