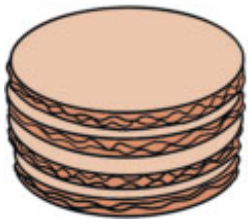
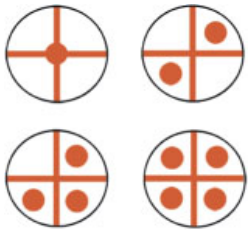
1 Draw around the coin onto the cardboard eight times, then cut out the circles to make eight pieces. Glue them together in pairs to make four thicker counters.



2 On one side of each counter, draw these four patterns.



How to play

3 The players take turns throwing the counters. On your turn, you get two throws.

- If some counters land upside down on the first throw, pick those counters up and throw them again. Then count up how many dots you scored.
- If all your counters land the right way up, you score 10 and get a second throw. Add the scores from both throws together.
- Each player adds up their score as they go.
