Formula A rule or set of rules that can be applied to lead to a particular result.

Fraction A part of a number or amount, shown as a proportion of a whole. For example, three-quarters (¾) means three of four equal parts.

Hexagon A shape with six straight sides.

Horizontal A line or shape that runs from side to side, like the horizon.

Mathematician An expert in mathematics.

Pentagon A shape with five straight sides.

Pi A decimal number, roughly 3.141592, which is the result of dividing the circumference of any circle by its diameter.

Prime number A number that can only be divided by itself and 1, such as 17.

Proof A demonstration that shows that an idea or theory in mathematics is true.

Radius The distance from the middle to the edge of a circle.

Right angle An angle of 90°, such as the corner of a square.

Scytale A cylindrical tool used to send coded messages.

Semicircle A half-circle.

Sequence A series of numbers that follow a rule predicting what the next number will be.
