

It doesn’t matter how many there are—but the more there are, the longer the game!

2 The two players take turns knocking the kayles down. When it’s your turn, you can knock down one kayle or two that are side by side.

3 The winner is the one who knocks over the last kayle!

Game science

Kayles was invented in 1908 by puzzle-crazy mathematics expert Henry Dudeney. It’s another game with simple rules that requires clever strategy to win! You need to try and end up with one kayle on its own or two kayles side by side. Make your moves carefully!
