Game science

As you can see, when you double the number each time, it grows slowly at first—but soon it’s shooting up! In fact, you should go past 1 million on day 21. And just ten days later, on day 31, the number will pass 1 BILLION (1,000,000,000).

In mathematics, this kind of growth, made by doubling a number again and again, is called exponential growth.
