2 Now for the hunt! Each person or team has to collect a group of objects that they think will add up to 1 m (or 3 ft) in length, or as close as possible. You can’t measure them, though. You have to guess.

***You can’t use things that have measurements on them, like a 15 cm (6 in) ruler. That would be cheating!***

3 Line the objects up alongside the 1 m (3 ft) measurement, and see who’s closest.

## Game science

It’s surprisingly hard to guess lengths accurately—but when you’ve played this a few times, you’ll get much better at it!
