SMOOTS

In 1958, some students decided to measure the Harvard Bridge in Massachusetts, USA. But instead of using feet or meters, they used their friend, Oliver Smoot!

To this day, Oliver Smoot's height at the time, 170 cm (5 ft 7 in), is known as one Smoot.

Smoot lay down while the others marked his length, then they repeated this all the way across the bridge. It was 364.4 Smoots long!
