

If you have enough, put 16 in the 16's column.
If there are enough left, put 8 in the 8's column.
If not, move to the 4's column … and so on.

4 When you've used all the coins, write 1's and 0's for each column. For example, if your number was 21, it would look like this:

16's	8's	4's	2's	1's
●●●●● ●●●●● ●●●●● ●		●●●●		●
1	0	1	0	1

So 21 in base 10 = 10101 in binary! The first to get each answer scores a point.
