Listing 4.8 Example of Tooltip component

```
const Tooltip: React.FC<TooltipProps> = ({ text, ref }) => {
  ...
  useEffect(() => {
    simulateHeavyPaint(DELAY); // Simulate a heavy paint operatio
    if (ref.current) {
       ...
    }
  }, [ref]);
   ...
};
```

The fix is located in `components/tooltip/Tooltip.tsx`, and can be executed with the command: `VITE_NAME=TooltipExample npm run dev`. To demonstrate the flickering issue, switch the implementation from `useLayoutEffect` to `useEffect` and observe the difference. The output is displayed in figure 4.8.

Figure 4.8 Tooltip example for a fruit catalog application.
