	messages like Short Message Service (SMS), in-app notifications, or push notifications.	
SVG API	Enable developers to create, manipulate, and animate scalable vector graphics for web pages.	Creating responsive icons or animations that scale across devices without losing quality by using the `<svg>` element
WebSocket API	Enable real-time, bidirectional communication between a web browser and a server.	Building real-time chat applications or live notification systems using the `WebSocket` object
YouTube API	Enable developers to embed and control YouTube videos within their web applications.	Embedding a YouTube video player with custom controls via YouTube's iframe API (using `window.YT`).

Modern web development relies on these APIs as the foundation for a wide range of powerful libraries. Table A.2 highlights JavaScript libraries that harness HTML APIs to deliver advanced features.
