Leading and trailing whitespace inside tags is trimmed.	`<div>  Hello world  </div>` renders as "Hello world".
Multiple spaces collapse into a single space.	`<div>Hello  world</div>` renders as "Hello world".
Use explicit spaces ({' '}) or CSS for consistent spacing between elements.	`<p>Hello {' '}world!</p>` renders as "Hello world".
Avoid using whitespace for visual spacing between elements; use CSS for predictable and consistent layouts.	`margin`, `padding`, or `gap` in CSS.

A.4 Essential React Hooks and the use API

React Hooks are a cornerstone of modern React development, enabling developers to manage state, side effects, and complex UI logic in a functional and declarative way. To streamline interview preparation, this appendix provides a prioritized learning list of React Hooks based on their relevance and frequency in technical interviews.

A.4.1 React Hook learning list

As of React 19, there are 17 builtin hooks. To help you focus on the most impactful ones for frontend interviews, we have organized them into high, medium, and low priorities based on their usage and importance.

Table A.7 highlights the high-priority React Hooks that are most commonly asked in interviews and are essential for building robust React applications.

Table A.7 High-priority React Hooks for frontend interview preparation

Priority	Hooks
1	`useState`—Fundamental for managing state in functional components. Widely used and often asked as a basic concept.
