```
  console.error('In onRecoverableError', error, errorInfo.compone
}
createRoot(document.getElementById('root')!, { #A
  onCaughtError,
  onUncaughtError,
  onRecoverableError,
}).render(
  <StrictMode>
    <App />
  </StrictMode>
);
```

Listing A.13 presents the console output of the `onCaughtError` hook when an error is caught within an active error boundary.

Listing A.13 Console output from the onCaughtError callback in createRoot

```

Conversely, listing A.14 displays the console output of the `onUncaughtError` hook when the error boundary is removed, causing the error to propagate to the root.
