CoderPad (https://coderpad.io)	Yes	Good	High
HackerRank (https://www.hackerrank.com)	Limited	Good	High (lar compani
CodeSignal (https://codesignal.com)	Yes	Good	Moderate to High
StackBlitz (https://stackblitz.com)	Yes	Excellent	Growing
GitHub Codespaces (https://github.com/features/codespaces)	Yes	Excellent	Growing

Platforms like CodeSandbox and StackBlitz are particularly popular for their speed, ease of use, and real-time collaboration features. In contrast, CoderPad, HackerRank, and CodeSignal are often selected for their structured assessment formats and robust analytics capabilities. GitHub Codespaces is increasingly favored for its ability to simulate real-world development environments.

In many cases, the screen calls will indicate which platform to use for the coding interview, so it is beneficial to practice on that platform beforehand. For example, CodeSandbox is a widely used coding test environment that offers up-to-date React and its tooling. It provides a free plan with some limitations, making it accessible for practice. Familiarity with CodeSandbox is beneficial, as it can also be used to work through coding exercises and prepare effectively for interviews.

CodeSandbox provides several React-focused templates, as shown in figure 1.3:

- Create React App with JavaScript (https://codesandbox.io/templates/new)
