1.7 Summary

- A typical frontend interview process includes four stages: initial screening, screening interview, full loop, and final decision.
- The funneling approach begins with broad, open-ended questions and narrows to more specific topics.
- Frontend interviews typically cover core web technologies (HTML, CSS, JavaScript/TypeScript), expert knowledge of frameworks like React, system design, behavioral assessments, and increasingly, AI-related topics.
- React, Angular, and Vue are the leading web frameworks for building user interfaces, with React being the most popular and widely adopted.
- Transitioning from Angular or Vue to React can be straightforward with effective strategies and a focus on shared concepts, such as component architecture and state management.
- Platforms like CodeSandbox are frequently used as coding test environments, offering up-to-date React tooling.
