

To try out this example, run the command: `VITE_NAME=FormAdvanced npm run dev`.

In the next chapter, we will explore the fundamentals of JavaScript and TypeScript.

2.5 Summary

Anticipate explaining the use of elements like `<header>`, `<main>`, `<nav>`, and `<footer>`. Interviewers look for understanding of how semantic markup enhances accessibility, SEO, and code clarity.

- Expect discussion on separating HTML (content) from CSS (presentation) for maintainable, consistent code and its impact on project workflows.
- Understanding CSS specificity and efficient use of selectors is important. Interviewers may ask about targeting elements or resolving style conflicts.
- Knowledge of standard HTML APIs and ARIA attributes is important. Interviewers may ask about making web interactions accessible and cross-browser compatible.
- Implementation and discussion of forms, including input handling, data submission, and proper use of HTML attributes for validation and user experience, are common topics.
