This collaboration among developers is then saved as metadata along with the change. GitHub is an example system that has a rich API with all of this data that will help you get better insight into your team's performance. The following listing shows an abridged example of data you can get from the GitHub API about a pull request.

Listing 4.1. Abridged example response from the GitHub API

As you can see, there's a lot of great data that you can start working with from this request. The key difference between the data you can get from DVCS over centralized VCS is data around collaboration; you can not only
