

Using this algorithm the team successfully created a metric that gave them an indication of how releases were faring. If they noticed CHD going below 80, they knew they had to check in to see what was not working as expected. If they were above 80, then they could let teams continue to release at will.

Some example inputs and outputs from this formula are shown in table 7.6.

Table 7.6. Example inputs and outputs from the CHD formula with the corresponding ratings in parentheses

Estimate Health	CLOC	Recidivism	Escaped Defects	CHD
0 (25)	49 (25)	0 (25)	0 (25)	100
0 (25)	100 (20)	0 (25)	0 (25)	95
1 (18)	65 (25)	10% (20)	0 (25)	88
0 (25)	33 (25)	20% (15)	1 (15)	80
-2 (11)	150 (15)	0 (25)	0 (25)	76
3 (4)	350 (0)	50% (0)	0 (25)	29
-1 (18)	45 (25)	50% (0)	2 (0)	43
