

As you can see, availability is straightforward to measure and there are plenty of tools that can monitor it for you. Figure 8.15 also shows that New Relic can give you error rates for your application.

Another way to get error rate and mean time between failures is through log analysis. Figure 8.16 shows a simple query in Splunk (www.splunk.com/) that can get the error rate as output by the logs.

Figure 8.16. Visualizing error rate using Splunk
