Figure 4.3. Centralized SCM system: there is one place everyone must get to.

Figure 4.4. Distributed version control system (DVCS): everyone has a repo.

Figure 4.5. The pull request workflow for source control usage

Figure 4.6. The object structure of a commit in a typical DVCS

Figure 4.7. The data structures you can get from a pull request in DVCS

Figure 4.8. Mapping your questions back to the objects you can get from the DVCS API

Figure 4.9. The data you can get out of centralized SCM

Figure 4.10. The Pulse page on GitHub gives you info on pull requests, issues, and amount of change. This is from the GoCD repo (github.com/gocd/gocd/pulse/weekly).

Figure 4.11. The graph of contributors over time. From GoCD (github.com/gocd/gocd/graphs/contributors).

Figure 4.12. Total commits to this repository over time show the amount of code changed from week to week and day to day. From GoCD (github.com/gocd/gocd/graphs/commit-activity).

Figure 4.13. The Code Frequency tab shows how much code is changing over time in CLOC. From GoCD (github.com/gocd/gocd/graphs/code-frequency).

Figure 4.14. The SCM punch card chart shows the days when the most change in your code occurs.
