List of Tables

Chapter 6. Data from your production systems

Table 6.1. APM and BI tools used in this chapter and the data they provide

Chapter 7. Working with the data you’re collecting: the sum of the parts

Table 7.1. Mapping estimates to time ranges and validating with Lucene

Table 7.2. Example inputs and outputs after normalizing the ideal number of CLOC

Table 7.3. Example inputs and outputs for normalizing estimate health data

Table 7.4. Example inputs and outputs for a normalized recidivism

Table 7.5. Example inputs and outputs from the formula used to normalize escaped defects

Table 7.6. Example inputs and outputs from the CHD formula with the corresponding ratings in parentheses

Chapter 8. Measuring the technical quality of your software

Table 8.1. Example inputs and outputs for a maintainable release rating

Chapter 10. Measuring your team against the agile principles

Table 10.1. Highlights of the agile principles and where to get data to measure them
