7.2.2 Creating a streaming chat application

7.3 Developing profiles and personas for agents

7.4 Powering the agent and understanding the agent engine

7.5 Giving an agent actions and tools

7.6 Exercises

8 Understanding agent memory and knowledge

8.1 Understanding retrieval in AI applications

8.2 The basics of retrieval augmented generation (RAG)

8.3 Delving into semantic search and document indexing

8.3.1 Applying vector similarity search

8.3.2 Vector databases and similarity search

8.3.3 Demystifying document embeddings

8.3.4 Querying document embeddings from Chroma

8.4 Constructing RAG with LangChain

8.4.1 Splitting and loading documents with LangChain

8.4.2 Splitting documents by token with LangChain

8.5 Applying RAG to building agent knowledge

8.6 Implementing memory in agentic systems

8.6.1 Consuming memory stores in Nexus

8.6.2 Semantic memory and applications to semantic, episodic, and procedural memory

8.7 Understanding memory and knowledge compression

8.8 Exercises

9 Mastering agent prompts with prompt flow

9.1 Why we need systematic prompt engineering

9.2 Understanding agent profiles and personas

9.3 Setting up your first prompt flow
