Listing 4.5 `OAI_CONFIG_LIST`

```
[
    {
        "model": "gpt-4",                       #1
        "api_key": "<your OpenAI API key here>",            #2
        "tags": ["gpt-4", "tool"]
    },
    {
        "model": "<your Azure OpenAI deployment name>",      #3
        "api_key": "<your Azure OpenAI API key here>",      #4
        "base_url": "<your Azure OpenAI API base here>",     #5
        "api_type": "azure",
        "api_version": "2024-02-15-preview"
    }
]
```

#1 Select the model; GPT-4 is recommended.
#2 Use the service key you would typically use.
#3 Select the model; GPT-4 is recommended.
#4 Use the service key you would typically use.
#5 Changing the base URL allows you to point to other services, not just Azure OpenAI.

Now, we can look at the code for a basic multi-agent chat using the out-of-the-box `UserProxy` and `ConversableAgent` agents. Open `autogen_start.py` in VS Code, shown in the following listing, and review the parts before running the file.
