Listing 4.11 `crewai_introduction.py` (agent section)

```
from crewai import Agent, Crew, Process, Task
from dotenv import load_dotenv

load_dotenv()

joke_researcher = Agent(      #1
    role="Senior Joke Researcher",
    goal="Research what makes things funny about the following {topic}",
    verbose=True,      #2
    memory=True,      #3
    backstory=(      #4
        "Driven by slapstick humor, you are a seasoned joke researcher"
        "who knows what makes people laugh. You have a knack for finding"
        "the funny in everyday situations and can turn a dull moment into"
        "a laugh riot."
    ),
    allow_delegation=True,     #5
)

joke_writer = Agent(     #6
    role="Joke Writer",
    goal="Write a humourous and funny joke on the following {topic}",
    verbose=True,     #7
    memory=True,      #8
    backstory=(     #9
        "You are a joke writer with a flair for humor. You can turn a"
        "simple idea into a laugh riot. You have a way with words and"
        "can make people laugh with just a few lines."
    ),
    allow_delegation=False,    #5
)
```

#1 Creates the agents and provides them a goal
#2 verbose allows the agent to emit output to the terminal.
#3 Supports the use of memory for the agents
#4 The backstory is the agent's background—its persona.
#5 The agents can either be delegated to or are allowed to delegate; True means they can delegate.
#6 Creates the agents and provides them a goal
#7 verbose allows the agent to emit output to the terminal.
#8 Supports the use of memory for the agents
#9 The backstory is the agent's background—its persona.

Moving down the code, we next see the tasks, as shown in listing 4.12. Tasks denote an agent's process to complete the primary system goal. They also link an agent to work on a specific task, define the output from that task, and may include how it's executed.
