Listing 7.1 Terminal command line

```
pip install git+https://github.com/cxbxmxcx/Nexus.git     #1

#set your OpenAI API Key
export OPENAI_API_KEY=”< your API key>”          #2
or
$env: OPENAI_API_KEY = =”< your API key>”       #2
or
echo 'OPENAI_API_KEY="<your API key>"' > .env   #2

nexus run      #3
```

#1 Installs the package directly from the repository and branch; be sure to include the branch.
#2 Creates the key as an environment variable or creates a new .env file with the setting
#3 Runs the application

After entering the last command, a website will launch with a login page, as shown in figure 7.2. Go ahead and create a new user. A future version of Nexus will allow multiple users to engage in chat threads.
