3.10) and enter the commands shown in listing 7.2. Again, refer to appendix B if you need assistance with any previous setup.

Listing 7.2 Installing Nexus for development

```
git clone https://github.com/cxbxmxcx/Nexus.git      #1

pip install -e Nexus     #2

#set your OpenAI API Key (.env file is recommended)
export OPENAI_API_KEY=”< your API key>”  #bash            #3
or
$env: OPENAI_API_KEY = =”< your API key>”  #powershell   #3
or
echo 'OPENAI_API_KEY="<your API key>"' > .env       #3

nexus run      #4
```

#1 Downloads and installs the specific branch from the repository
#2 Installs the downloaded repository as an editable package
#3 Sets your OpenAI key as an environment variable or adds it to an .env file
#4 Starts the application

Figure 7.3 shows the Login or Create New User screen. Create a new user, and the application will log you in. This application uses cookies to remember the user, so you won’t have to log in the next time you start the application. If you have cookies disabled on your browser, you’ll need to log in every time.
