
Adding memories
User:
[I like time travel movies]
I like time travel movies
New memories can come from a conversation or can be populated as a set of beginning facts, preferences, and so on.
Embedding
Vector DB
User likes time travel movies
User likes sci-fi movies
Stored embeddings and text
Memory function, extracts relevant memories
LLM
User likes time travel movies
User likes sci-fi movies
Conversations are then fed back into the memory function to create new memories.
Basic memory augmentation
User:
What movie should I watch?
What movie should I watch?
Augmented prompt user:
What movie should I watch?
Remembered facts:
User likes time travel movies
LLM
Assistant:
You should watch this movie on time travel.
Response sent back to user
Embedding
Vector DB
Converted to embedding and then used to query database
