Listing 10.7 shows the YAML pseudocode that describes the blocks and the inputs/outputs of the flow in more detail. The default problem statement in this example isn't the same as in figure 10.3.

Listing 10.7 `chain-of-thought-prompting` flow

```
   Inputs:
        statement  : the statement problem to be solved
        expected : the expected solution to the problem

   LLM: cot (the prompt used to solve the problem)
        inputs: statement
        outputs: the predicted answer given the problem statement

   LLM: evaluate_answer (the prompt used to evaluate the solution)
        inputs:
               statement: -> input.statement
               expected: -> input.expected
               predicted: -> output.cot

        outputs: a score of how well the problem was answered

   Outputs:
        statement: -> input.statement
        expected: -> input.expected
        predicted: -> output.cot
        evaluation_score: output.evaluate_answer

   ### Example Output
{
    "evaluation_score": "0.5",     #1
    "expected": "After the final jump, Max finds himself
in the year 1980 and he is 75 years old.",     #2
    "predicted": " Max starts in the year 2300 and
travels backward in 40-year increments, spending 5 years
in each period. The journeys will be as follows:
\n\n- From 2300 to 2260: Max is 25 + 5 = 30 years old.
\n- From 2260 to 2220: Max is 30 + 5 = 35 years old.
\n- From 2220 to 2180: Max is 35 + 5 = 40 years old.
\n- From 2180 to 2140: Max is 40 + 5 = 45 years old.
\n- From 2140 to 2100: Max is 45 + 5 = 50 years old.
\n- From 2100 to 2060: Max is 50 + 5 = 55 years old.
\n- From 2060 to 2020: Max is 55 + 5 = 60 years old.
\n- From 2020 to 1980: Max is 60 + 5 = 65 years old.
\n- From 1980 to 1940: Max is 65 + 5 = 70 years old.
\n- From 1940 to 1900: Max is 70 + 5"     #3
}
```

#1 The evaluated score for the given solution
#2 The expected answer for the problem
#3 The predicted answer shows the reasoning steps and output.

Dig into the inputs and check the problem statement; try to evaluate the problem yourself. Then, run the flow by pressing Shift-F5. You should see output similar to that shown in listing 10.7.
