Figure 2.6 The LM Studio server page and a server running an LLM

You can review an example of the Python code by opening `chapter_2/lmstudio_ server.py` in VS Code. The code is also shown here in listing 2.7. Then, run the code in the VS Code debugger (press F5).

Listing 2.7 `lmstudio_server.py`

```
from openai import OpenAI

client = OpenAI(base_url="http://localhost:1234/v1", api_key="not-needed")

completion = client.chat.completions.create(
  model="local-model",                          #1
  messages=[
    {"role": "system", "content": "Always answer in rhymes."},
    {"role": "user", "content": "Introduce yourself."}       #2
  ],
  temperature=0.7,
)

print(completion.choices[0].message)      #3
```

#1 Currently not used; can be anything
#2 Feel free to change the message as you like.
#3 Default code outputs the whole message.

If you encounter problems connecting to the server or experience any other problems, be sure your configuration for the Server Model Settings matches the model type. For example, in figure 2.6, shown earlier, the loaded model differs from the server settings. The corrected settings are shown in figure 2.7.
