

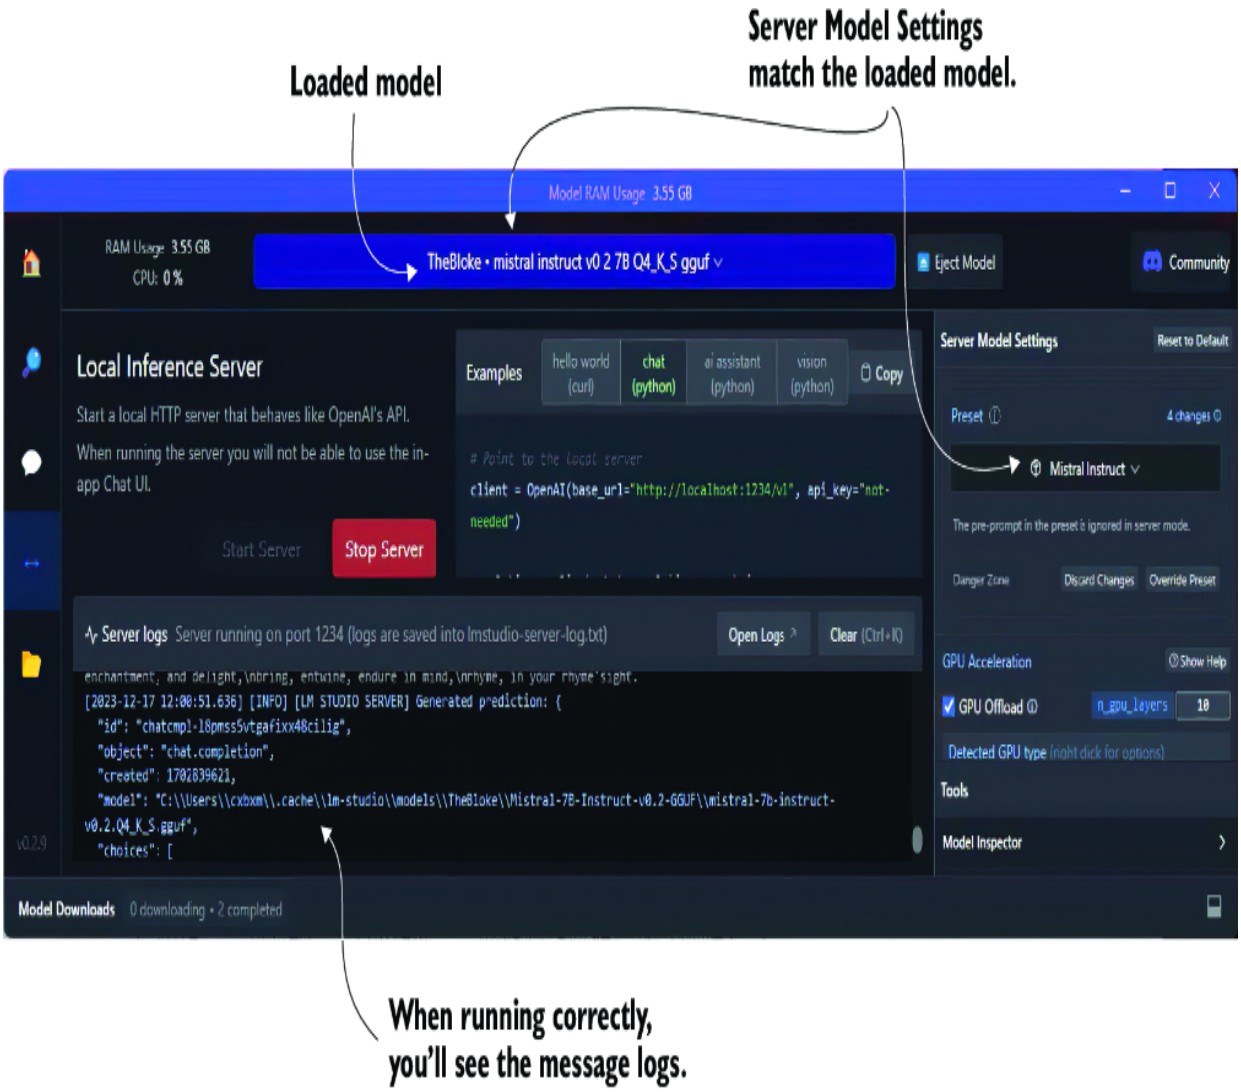

Figure 2.7 Choosing the correct Server Model Settings for the loaded model

Now, you can use a locally hosted LLM or a commercial model to build, test, and potentially even run your agents. The following section will examine how to build prompts using prompt engineering more effectively.

2.3 Prompting LLMs with prompt engineering

A prompt defined for LLMs is the message content used in the request for better response output. *Prompt engineering* is a new and emerging field that attempts to structure a methodology for building prompts. Unfortunately, prompt building isn't a well-established science, and there is a growing and diverse set of methods defined as prompt engineering.
