```
plt.grid(True)
plt.show()
```

Other Common Chart Types in Matplotlib

1. Bar Charts:

```
categories = ['A', 'B', 'C']
values = [10, 15, 7]

plt.bar(categories, values, color='skyblue')
plt.title('Bar Chart')
plt.xlabel('Categories')
plt.ylabel('Values')
plt.show()
```

2. Scatter Plots:

```
x = [5, 7, 8, 10, 15]
y = [12, 15, 20, 22, 30]

plt.scatter(x, y, color='red')
plt.title('Scatter Plot')
plt.xlabel('X-axis')
plt.ylabel('Y-axis')
plt.show()
```

3. Histograms:

```
import numpy as np

data = np.random.randn(1000)
plt.hist(data, bins=30, color='purple')
plt.title('Histogram')
plt.xlabel('Values')
plt.ylabel('Frequency')
plt.show()
```

Customizing Matplotlib Plots

Matplotlib allows extensive customization to enhance the appearance of charts:

- **Adding legends:**

```
plt.legend(['Dataset 1', 'Dataset 2'])
```

- **Setting figure size:**

```
plt.figure(figsize=(10, 6))
```

- **Using annotations:**

```
plt.annotate('Peak', xy=(3, 6), xytext=(4, 7), arrowprops=dict(facecolor='black', arrowstyle='->'))
```
